

HONGKONG FIREPROS BUILDING MATERIALS CO., LTD

ABOUT US

HongKong Firepros Building Materials Limited is a registered in HongKong, specializing in the introduction and marketing of international high class fire prevention building materials professional company. Mainly engaged in the world's high class fire products. Now it has successfully introduced the European high class fire resistant glass (the 2nd generation crystal silicon new fire resistant glass).

Factories in mainland China production, the product has passed BSEN1364, BSEN1634, BS476 Part22, AS1530.4, GB15763.1 multiple domestic and GB standards of testing, Since the product appereal on the market, it has been greeted by the owner professionals, high-end customers. Fpos is a kind of sustainable stability and green environmental protection type of insulation quality fire-resistant glass, recognized as the most internationally high-end product, with a 5 years warranty period.

In 2015, Fpos was awarded the "MOST FAVORED PRODUCT BY ENGINEERS" .

In 2016, the new high-quality crystalline silicon fireproof glass specially used for external walls won the "STAR PRODUCT AWARD" and "TECHNOLOGICAL INNOVATION AWARD";

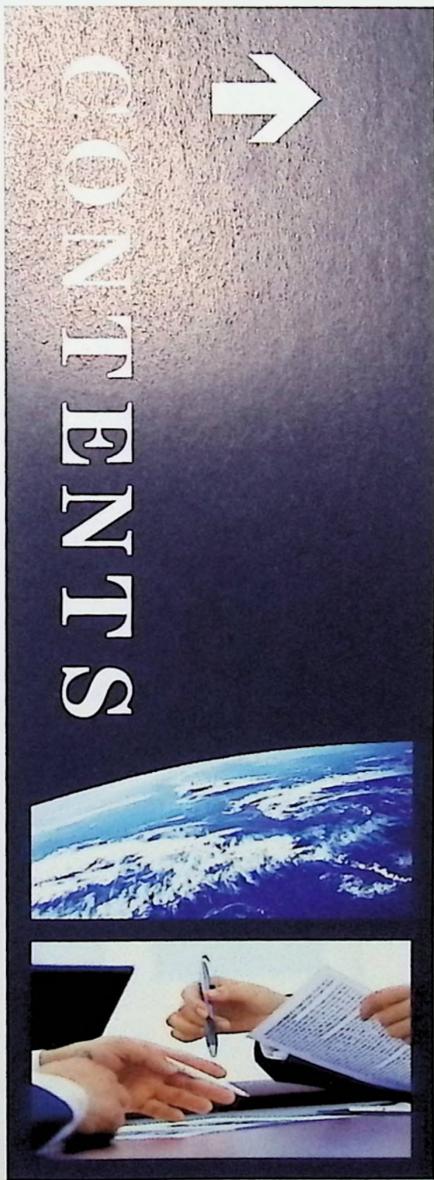

In 2017, the fireproof window special fireproof glass won the "NETWORK POPULARITY AWARD" and "ANNUAL STAR PRODUCT AWARD";

In 2018 aluminum doors and windows curtain wall new products expo fire platform, lighting roof glass won the "ANNUAL STAR PRODUCT AWARD", and the building doors and windows curtain wall industry jinxuan award "THE MOST INNOVATIVE PRODUCTS";

In 2019 China window and curtain wall 2019 innovation award, CCC certified super large class a fireproof window won "STAR PRODUCT AWARD OF THE YEAR".

The successful introduction and production of Fpos crystal silicon fireproof glass fill up the gap that there is no high-end fireproof glass in China.

Test of FPOS in China23

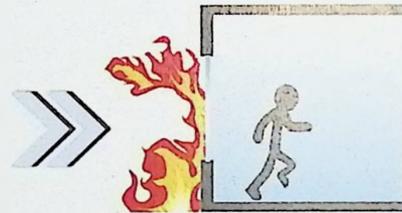

Our products have passed many fire test in China Mainland, Hong Kong, Macao, Taiwan, Singapore, India, UK and other countries and regions.

FIRE RESISTANT CLASSIFICATION

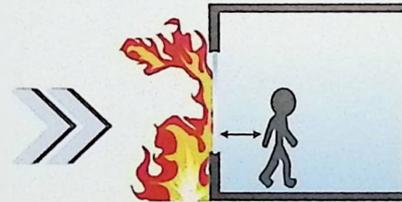

E=Integrity Only

Prevent the hot toxic gases from penetrating into the nonfire side.

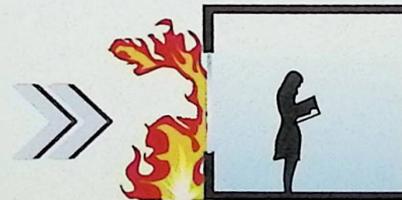

EW=Integrity & Low Radiation

Control of the transmission of radiated heat below a specific level

EI=Integrity+Insulation

Limited mean temperature rise on the unexposed side (e.g. ≤140°C average, ≤180°C maximum)

Example: EI30=fire resistant classification of 30 minutes integrity and 30 minutes insulation

A Better Choice with Fpos FR Glass

Fire protection solutions have to be targeted to suit different specific requirements. Architects are looking for elegant, transparent and visually appealing designs which comply with the International Building Code. For investors, building owners and facility managers the priority is high quality, with less maintenance period, high class of reliability and affordability performance. Installers and fabricators will considering of fire-resistant glass whether it is available in ranges of practical and approved sustainable solutions within high quality.

FIREPROOF / INSULATION / STABLE « New

Performance Of Fpos

- Unrivalled range of tested and approved framing solutions for internal doors, screens and floors as well as external facade/skylight/Floor applications
- Complete product range to meet the requirements for various international fire test standards (EN, BS, AS, GB)
- More than 100 approvals in various framing systems according to international test reports
- Designed to be combined with additional functional properties such as sound insulation, low-e, solar control, impact absorption performance and others
- Suitable for large projects with complex safety and security requirements to achieve high levels of protection (high-rise buildings, sport arenas and stadiums, schools, hospitals, airports, parliament buildings and railway stations)
- Technical Advice and Support for project specific solutions from Hengbao
- Application temperature stability (from -5 °C up to +45 °C)

Within these varying demands for the global market. Our research and development programme meet with such complex products requirement to cater for the involvement of all who are part of the process. Leading the China market with our advance technology product and offering people a safer place to live are part of Firepos' business objective. We will constantly improve the quality and performance of both our products and services.

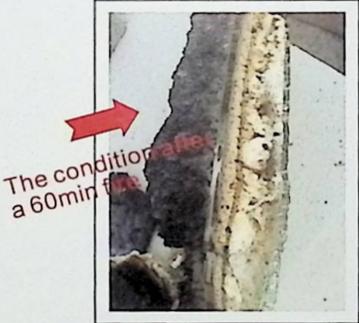

Product Introduction

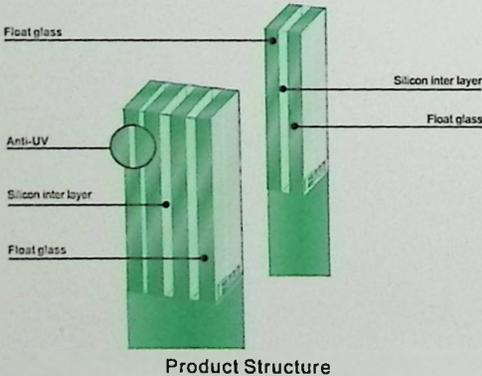

FPOS fire resistant glass use new type of hard inorganic transparent fire resistant materials which introduced by our company. It has advantages of high strength, high adhesion, high transparency, high stability, high weather resistant and good fireproof performance, etc. FPOS is an advanced fire integrity/insulation glass with sustainable, stable and eco-friendly, its core is high quality crystalline silicon fire hard glue. It can bonded to glass with various forms, combined into a variety of fire performance and strength function of the product.

Fire Resistant Principle

When the accident happen, the fire side of float glass will break quickly after high temperature, the crystal silicon fireproof glue will begin foam and expansion (foam and expansion ratio of 10 times), absorb the heat from the flame combustion, and formation an opaque fireproof sheet. It has strong firmness, can effectively cut off the flame, smoke and toxic gases. It can also block the heat from the flame.

FIREPROOF / INSULATION / STABLE 《New

ADVANTAGES AND CHARACTERISTICS

It is a sustainable stable green and high-quality fire resistant glass.

Comparison between FPOS fire resistant glass and the traditional fire resistant glass in the aspects of performance and characteristics:

	Fireproof Glue	Fire side burst	Fire side fall off	The interlayer is foamed. Fire insulation is less than 140°C	Heat radiation	Fire Integrity	Free warranty Period	Stability	Price	The usage of Europe and other developed countries
SGU	×	×	×	×	×	√	2 years	Normal	Normal	seldom
DGU	Soft, Organic	√	√	√	√	√	2 years	Normal	Normal	seldom
FPOS	Hard, Inorganic	√	√	√	√	√	10 years ★	Very stable	high	common

Remark: SGU=Single-layer Fire Resistant Glass Unit;
DGU=Double-layer Glass Fire Resistant Glass Unit;

★ As a general rule, interior used have a warranty within 10 years, and exterior used have a 5 year warranty

TEST OF FPOS RESISTANT GLASS

FPOS fire resistant glass delivers superior fireproof and insulation performance. Even with only 4mm intumescent interlayer, it retains its radiation protection for a long time after the loss of thermal insulation performance. The 10mm FPOS fire resistant glass has successfully created the world's thinnest and highest-performing 120 minutes low radiation and fire-rated glass on Jun. 2nd, with the structure of 3mm glass + 4mm intumescent interlayer + 3mm glass.

TEST REPORT OF INCLINED FPOS FIRE RATED GLAZING PARTITION SYSTEM WITH BUTT JOINT

FIRE RESISTANCE TEST REPORT

INCLINED GLAZED PARTITION SYSTEM WITH BUTT JOINTS

in accordance with **BS EN 12564-1: 2009**

Test Sponsor: Hong Kong Fireproof Building Materials Ltd/
 Heshan Hongshao Fire Resistant Glass Factory Co., Ltd
 No. 8 Famen Industry Area, Tangyan Town,
 Heshan City, Guangdong, China.
 Tel: 86-0752 8210018 Fax: 86-0752 8218300

Test Laboratory: Forte Testing and Consultants Company Limited
 (Certified Laboratories)
 Flat 31, S.F. Sky Loft, 9 Hoi King Road,
 Tsim Sha Tsui, Kowloon, Hong Kong.
 Tel: 852 2152 0428 Fax: 852 2152 2727

Report Number: FT 15-155
Date of Issue: 2016-07-18

FORTE has received Fire Testing and Consultants Company Limited (Reg. No. 1971) under HOKLAS for specific laboratory activities as listed in the HOKLAS Certificate of Accredited Laboratories. The results shown in this report were generated by the laboratory in accordance with terms of Accreditation. This report may not be reproduced, stored in a retrieval system or written approval form FORTE.

 HOKLAS Approved Signatory: **Dr. Chan Yuh Kit**

PAGE 1 of 23

REPORT no.: FT 15-155

1. Scope of Test

The report was a record of a fire resistance test conducted by Forte Testing and Consultants Co., Ltd, in conformity with requirements in BS EN 12564-1: 2009 "Fire resistance tests for fire-insulating structures - Part 1: Walls" and particular requirements in BS EN 12564-1: 2009 "Fire resistance tests - Part 1: General requirements". The test subject was an inclined glazed partition system with butt joints. The specimen was supplied by test by Goryu Up Industries Limited and Hong Kong Fireproof Building Materials Limited Heshan Hongshao Fire Resistant Glass Factory Company Limited, the Sponsors.

The specimen achieved the following fire resistance:

PROPERTY (E)	INSULATION (I)
Structural Integrity	60 Minutes
Gas Escape	60 Minutes
Cracks	60 Minutes
Flame Penetration	60 Minutes
Average Temp. Rise	60 Minutes
Max. Temp. Rise	60 Minutes

2. Test Information

Test Laboratory: FORTE Testing and Consultants Company Limited
 West Side of Huan Kang Street, An Yu Road, Shunan, Baotou District, Shenzhen, Guangdong Province, China.

Test Sponsors: Hong Kong Fireproof Building Materials Limited
 Heshan Hongshao Fire Resistant Glass Factory Company Limited
 Heshan Hongshao Fire Resistant Glass Factory Company Limited

Class Plates Manufacturer: QT 16-0734

Class Plate No.: QT 16-0734

Test Number: A total of two sets of report (Report no. FT15-063 and FT15-155) with identical content had issued at request of the sponsors.

Date Tested: 2016-06-15 **Start Time:** 14:54

Approved Test Operator: Mr. Tang Shui Fai

Witness of the Test: Mr. Jui Lee & Ms. Lu Shu Qing, Official Designate of the Sponsors

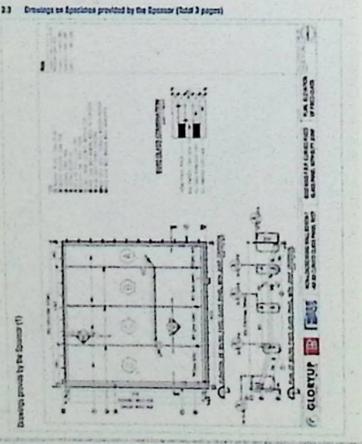

Report Issue Record: Version 1 - 2016-07-18

SMOKE CONTROL, FLEXIBILITY AND TENSION TESTING OF DOOR

Smoke control test in accordance with European Standard BSEN

RADIATION TEST

Thermal stability is better than the national standard of 300 times.

TEN-YEARS LIFE ASSESSMENT

Our products are evaluated on a regular basis for determine the product's stability. According to the European standard, we use the professional equipment for testing. Placed the products in the 45±5°C thermostat box, 24 hours a day to maintain constant temperature, for a continuous 3 months without interruption for 2000 hours thermal aging test. Only the product which passing the test can qualified as a high class product.

Promotion Letter

Dear Sir/Madam,

Experience Sharing Seminar by Fpos on Latest Development of Fire Resistant (FR) Glass at HongKong

The Code of Practice for Fire Safety in Building 2011 which enacted on 1 April 2012 has promulgated various new fire safety concept / standards, inter alia, BS 1365 and 1364 for Fire Barrier (Fire Resistant Partitions and Flooring) to respectively substitute the obsolescing BS 476 Part 21 and Part 22, and a new BS EN 1634 fire safety standard for Fire Rated Doors, Partitions, roofing and Floors. A new EN 12543-4 is also introduced to assess the Durability and UV-Resistance of FR glass. Users may be badgered with the new standards when selecting FR glass for their projects.

Hong Kong Firepros Building Materials Limited with our core production plant in China is the unique FR glass manufacturer in Asia patent to produce Europe standard BS EN 1364/1634, Australia standard AS 1530.4 FR Glazing wall / partition/ door system, and BS EN 1365 standard FR Glazing Roof and Floorings. All our products have also passed the durability and UV-resistance test according to the standard of EN 12543 Part 4.

The quality and services pledge of Fpos FR glazing and fire-rated glass flooring are well-recognized in Hong Kong, and can be underpinned our project references in a number of Government and Famous Company's project, namely, K-21 Redevelopment Scheme, ISTA College, Chinese University etc.

Fpos also successfully launched our products abroad. In China, a new development named China Mobile Headquarter, Tianjin Lujiazui Square and Lujiazui Hongqiao Metropolitan Hotel, Beijing Hengda riverside north bank due to its new codes in China as well as luxurious design and costly unit price, has selected Fpos FR glass to fulfill the Architect's innovative design to arrange a display-area for the tenants space use. In view of our customer-oriented attitude in the course of our services and unique FR glazing production experience, representatives from HongKong Firepros were invited by a number of Government Officials, Architect firms in Hong Kong to share with them our products and experience on various aspects on the latest development of EN grade FR glass. In Saudi Arabia Unite, the project of HARAMAIN HIGH-SPEED RAIL applied large quantity of the Fpos FR glazing, due to the unique production experience, long term of quality guarantee and professional services.

Fpos believes that professional and dedicated customer-service is equally important to quality products. While FR glass has been regarded as a mysterious building element for decades due to its patent nature, Fpos is pleased to help our client to select the most-effective FR glass for your project.

As a FR glass producer in China, we are pleased to attend your workplace to share with you our experience on any of the following issues on FR glass:

1. Compare the new EN 1364/ 1634 and 1365-2 standard on fire resistant elements with the obsolescing BS 476;
2. New innovative segmented curved butt-joint FR glass (frameless) for 60/60 launched;
3. Compare China-made FR glass with EN grade FR glass
4. Means to select durable, UV-resistant and reliable FR glazing; and
5. Aim for the latest development of 240/240 glass partition fire test on year 2017.

Interested party could send your request to e-mail 426595866@qq.com or www.firepros.hk. The visual-aid will be in Chinese and the experience sharing session can be conducted in English or Cantonese.

Yours faithfully,
William Chen
Managing Director
Hong Kong Firepros Building Materials Limited
