平推窗五金系列

平推窗开启原理是把整个窗扇向外推开的开启形式，适用于需要大量通风效果的窗型。

可选配防止配件移位及增加型材强度的PVC垫片。

可以体现手动或者电动开启方式，附有可调节性能组件。

The principle of flat window opening is to push the whole window fan outward, which is suitable for the window type requiring a large amount of ventilation effect.
PVC gaskets are optional to prevent parts from shifting and increase profile strength.
It can be operated manually or electrically with adjustable performance components.

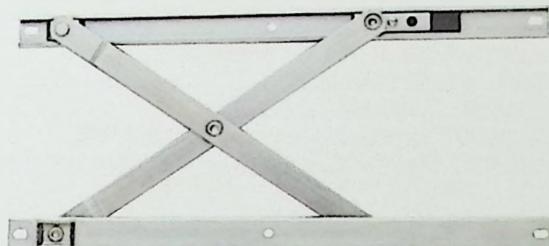

执手操作 Handle operation

大型平行外推窗系列执手是针对大中型窗户研发生产的，普通窗型窗户除外，可以按照窗户大小定制。不使用高价位电动机的基础上，可以顺畅操作的执手系统。

Large parallel push-out window series handlers are developed and manufactured for large and medium windows. Except for ordinary window type windows, they can be customized according to the size of windows.
Handling system can operate smoothly without using high-price motors.

- 两万五千次循环测试
- 为了适应腐蚀环境采用最高品质的不锈钢

The flat hinge not only provides ventilation function, but also meets the aesthetic requirements of modern architecture.

- Flat push hinges can be used in solid wood, plastic steel and aluminium alloy profiles.
- The balanced airflow generated on all sides of the window when it is opened provides the best natural ventilation effect.
- Can be used as a smoke outlet
- As part of an automated climate control solution
- Can be operated manually or electrically
- When the fan closes, the hinges are completely hidden
- Twenty-five thousand cycle tests
- The highest quality stainless steel is used to adapt to corrosive environment.

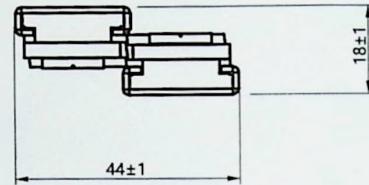

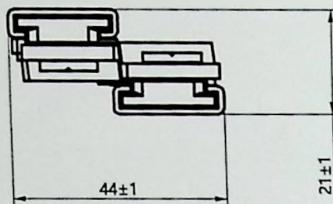

安装说明 Installation instructions

位置和活动空间

- 安装铰链的位置必须要满足平推铰链的尺寸要求
- 安装在框扇上的铰链需要与框扇型材匹配
- 框扇之间的尺寸位置必须在下列最大尺寸范围内

Location and activity space

The position of the installation hinge must satisfy the size requirement of the flat hinge.
The hinge mounted on the frame fan needs to match the profile of the frame fan.
Dimensional positions between frame fans must be within the following maximum dimensions

五金布局

- 侧边铰链的安装需要与顶部铰链配套。
- 检查框扇型材是否与沃德沃克平推铰链匹配，铰链叠高有18mm、21mm两种。
- 安装垂直方向的基座，当关闭时确保扇上的位置是正确的，尺寸基于所选择的型材。
- 基于这些数据（高宽单位为mm），重量单位kg, 创建你需要的配置。
- 如果尺寸和重量在极限值的上限，选择上级规格，不要超出最大推荐值。
- 手动操作安装在竖侧中心位置的两个执手，如果槽口宽度超过1500mm,请与沃德沃克联系。
- 平推铰链没有密封功能，如果手动操作，需另外安装锁闭系统。如果窗户是由电机控制，需在两个锁闭系统电机中同步。

Hardware layout

Installation of side hinges should be matched with top hinges.

Check whether the profile of the frame and fan matches with the woodwork push hinge, and the hinge overlap height is 18 mm and 21 mm.

Install the vertical base to ensure that the position on the fan is correct when closed and the size is based on the selected profile.

Based on these data (mm in height and width) and kg in weight, create the configuration you need.

If the size and weight are at the upper limit of the limit value, select the superior specification and do not exceed the maximum recommended value.

Hand-operated two handles installed at the center of the vertical side. If the slot width exceeds 1500mm, please contact Wardwook.

The flat push hinge has no sealing function. If it is operated manually, additional locking system should be installed. If the window is controlled by an electric motor, synchronization devices should be installed in the motors of the two locking systems.

注意

- 我们建议每扇窗户四个方向都安装平推铰链,左右为承重,上下为平衡。
- 对于一般玻璃系统,槽口高度和宽度是从槽口处计算(不是洞口尺寸或外框尺寸);对应玻璃结构系统最小的开启距离需要与铰链匹配。
- 当项目规格超出上表规格时,请与沃德沃克联系。
- 每个竖边中心位置安装执手,特殊规格要求请与沃德沃克联系。
- 开启距离是从锁闭位置到建议开启的位置的尺寸。

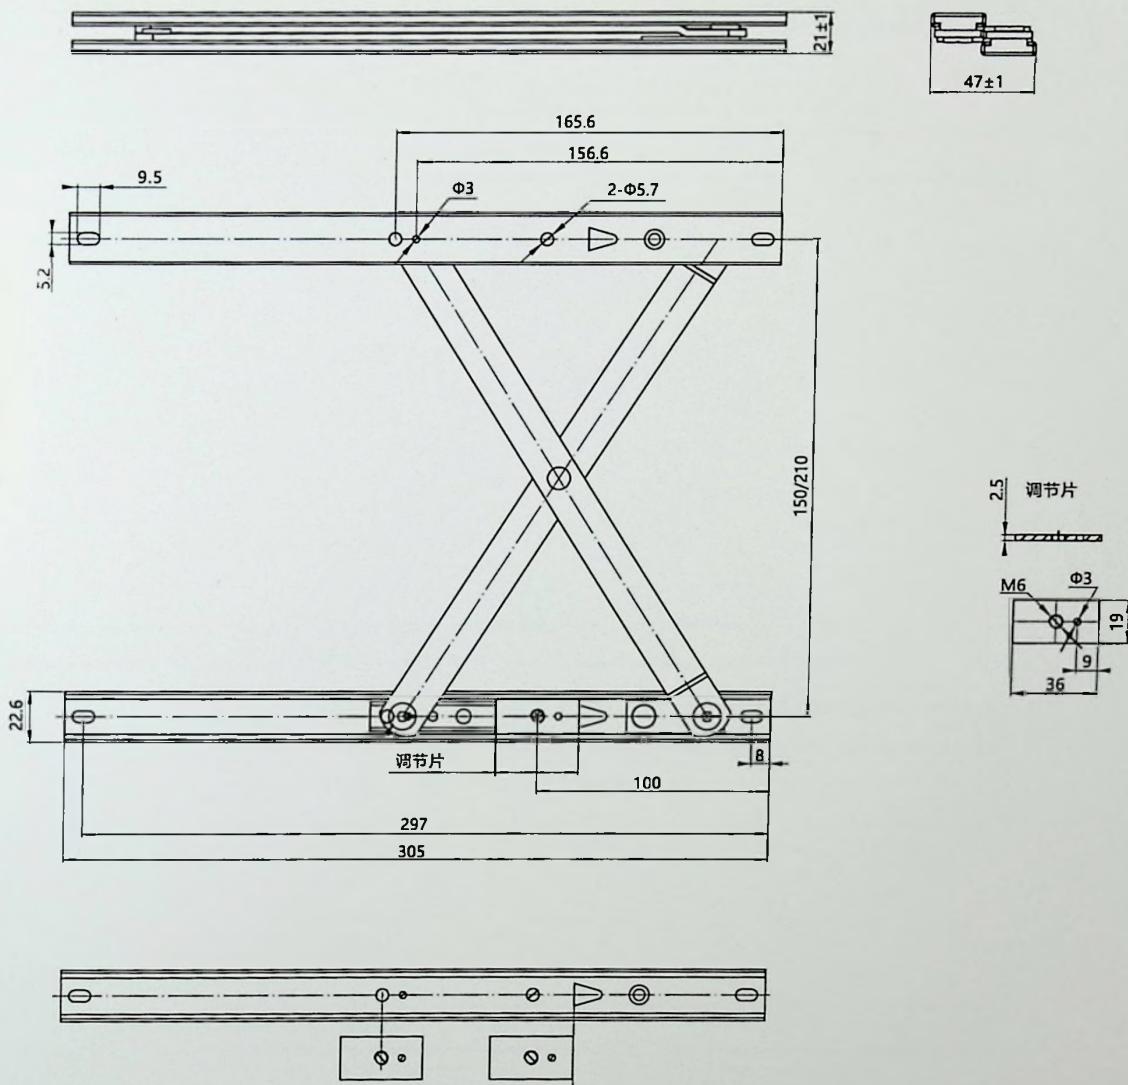

Note

We recommend that each window be equipped with flat hinges in four directions, with load-bearing from left to right and balanced from top to bottom.
For general glass systems, the groove height and width are calculated from the groove (not the size of the groove or the outer frame); the minimum opening distance corresponding to the glass structure system needs to match the hinge.
When project specifications exceed those listed above, please contact woodwork.
Install handles at the center of each vertical edge. For special specifications, please contact woodwork.
The opening distance is the size from the locking position to the recommended opening position.

竖向平推铰链固定端在顶部
框部件靠近室内
竖向平推铰链滑动端在底部
竖向铰链如果一侧只安装一个，铰链安装在扇垂直中间位置。
若竖向单边多于一只，上下空出来的距离，保留一致。
Vertical flat push hinge fixed end at the top
Frame parts close to the room

If the vertical hinge is only installed on one side, the hinge is installed in the vertical position of the fan.
If there is more than one vertical side, the distance between the upper and lower sides remains the same.

水平方向平推铰链上下开口可以一致也可以不一致。
水平方向铰链安装在水平中间位置
The upper and lower openings of the hinges in the horizontal direction can be consistent or inconsistent.
The horizontal hinge is installed in the horizontal middle position

使用说明 Instructions for use

平推铰链

- 所有框上螺丝固定位置必须预打孔，参考螺丝位置规格表。如果需要调节，则仅仅可调节处的螺丝定位孔需要预打孔，否则，所有的螺丝都需要预打孔。
- 将铰链挂接到框上，并用螺丝固定，在竖边固定点朝上，滑动块朝下。
- 如果需要调节，先松开螺丝，重新按需求定位框扇的位置，当扇的位置是正确的，钻好最后的螺丝定位孔并固定好其它螺丝，如果没有事先预打孔。

固定螺丝

- 用直径为5mm的盘头螺丝固定平推铰链框扇上的连杆安装铰链时，必须满足下列条件：
- 固定铰链的螺丝必须与型材有充分的壁厚连接。
- 螺丝厂家的建议必须遵从，任何来自门窗系统建筑商或供货商的指导说明都必须遵从。
- 细心能避免严重事故的发生。

Note: 制造商有责任确保螺丝能提供足够的强度支撑扇的重量，并且有足够的使用寿命。

Push hinge

- All positions of the screw on the frame must be pre-drilled, referring to the screw position specification table. If adjustment is required, only the adjustable screw positioning holes need to be pre-punched, otherwise, all the screws need to be pre-punched.
- The hinge is attached to the frame and fixed with a screw. The fixed point at the vertical edge is upward and the slider is downward.
- If you need to adjust, loosen the screw first and re-locate the position of the frame fan according to the demand. When the position of the fan is correct, drill the final screw positioning hole and fix the other screw, if there is no pre-drilling.

Fixing screw

- The following conditions must be met when fixing hinges with a 5 mm diameter disc head screw on a connecting rod on a flat hinge frame fan:
 - The screw for fixing the hinge must be adequately connected with the profile wall thickness.
 - The screw manufacturer's advice must be complied with, and any instructions from the door and window system builder or supplier must be complied with.
 - Care can avoid serious accidents.
- Note:** The manufacturer of doors and windows has the responsibility to ensure that the screw provides sufficient strength to support the weight of the fan and has sufficient service life.

性能和维护 Performance and maintenance

维护和润滑

- 正如很多机械装置一样，铰链也需要定期维护和润滑，锚点、滑块、滑槽必须保持清洁没有灰尘，不能有任何阻挡物在里面。
- 在安装时，需要用中性润滑油充分润滑各个锚点
- 每两年需要进行如下检测
 - 1) 清洁铰链的各个锚点、滑块和滑槽
 - 2) 按上面提示润滑
 - 3) 检查气密性和螺丝和铆钉的安全

铰链的使用寿命

- 为了达到最理想的使用寿命，上述关于环境限制、扇的尺寸和重量、维护和润滑都必须遵守。
- 在遵守安装维护指导下，平推铰链通常至少可有一万次的启闭次数。

Maintenance and lubrication

- Like many mechanical devices, hinges also need regular maintenance and lubrication. Anchors, sliders and chutes must be kept clean and dust-free, and no obstructions can be found in them.
- When installing, it is necessary to lubricate each anchor point with neutral lubricant.
- The following tests are required every two years
 - 1) Clean the anchors, sliders and chutes of the hinges
 - 2) Lubricate according to the above instructions
 - 3) Check airtightness and safety of screw and rivet

Service Life of Hinges

- In order to achieve the best service life, the above-mentioned environmental constraints, fan size and weight, maintenance and lubrication must be observed.
- In accordance with the installation and maintenance instructions, the flat hinge can usually be opened and closed at least 10,000 times.
